

Formalization of Pure Type System

1. Definition

(i) A *pure type system (PTS)* is a triple tuple $(\mathcal{S}, \mathcal{A}, \mathcal{R})$ where

- (a) \mathcal{S} is a set of *sorts*;
- (b) $\mathcal{A} \subseteq \mathcal{S} \times \mathcal{S}$ is a set of *axioms*;
- (c) $\mathcal{R} \subseteq \mathcal{S} \times \mathcal{S} \times \mathcal{S}$ is a set of *rules*.

(ii) *Raw expressions* A and *raw environments* Γ are defined by

$$\begin{aligned} A &::= x \mid s \mid AA \mid \lambda x : A. A \mid \Pi x : A. A \\ \Gamma &::= \emptyset \mid \Gamma, x : A \end{aligned}$$

where we use s, t, u , etc. to range over sorts, x, y, z , etc. to range over variables, and A, B, C, a, b, c , etc. to range over expressions.

(iii) Π and λ are used to bind variables. Let $\text{FV}(A)$ denote free variable set of A . Let $A[x := B]$ denote the substitution of x in A with B . Standard notational conventions are applied here. Besides we also define $A \rightarrow B$ as $(\Pi x : A. B)$ when $x \notin \text{FV}(B)$.

(iv) The relation \rightarrow_β on raw expressions is the compatible closure of

$$(\lambda x : A. M)N \rightarrow_\beta M[x := N],$$

which can be used to define the notation \twoheadrightarrow_β and $=_\beta$ by convention.

(v) Type assignment rules for $(\mathcal{S}, \mathcal{A}, \mathcal{R})$ are given in Figure 1.

<p>(Ax) $\frac{}{\vdash s : t} ((s, t) \in \mathcal{A})$</p>	<p>(Var) $\frac{\Gamma \vdash A : s}{\Gamma, x : A \vdash x : A} (x \notin \text{dom}(\Gamma))$</p>
<p>(Weak) $\frac{\Gamma \vdash b : B \quad \Gamma \vdash A : s}{\Gamma, x : A \vdash b : B} (x \notin \text{dom}(\Gamma))$</p>	<p>(App) $\frac{\Gamma \vdash f : (\Pi x : A. B) \quad \Gamma \vdash a : A}{\Gamma \vdash fa : B[x := a]}$</p>
<p>(Lam) $\frac{\Gamma, x : A \vdash b : B \quad \Gamma \vdash (\Pi x : A. B) : t}{\Gamma \vdash (\lambda x : A. b) : (\Pi x : A. B)}$</p>	<p>(Pi) $\frac{\Gamma \vdash A : s \quad \Gamma, x : A \vdash B : t}{\Gamma \vdash (\Pi x : A. B) : u} ((s, t, u) \in \mathcal{R})$</p>
<p>(Conv) $\frac{\Gamma \vdash a : A \quad \Gamma \vdash B : s}{\Gamma \vdash a : B} (A =_\beta B)$</p>
